## WHAT'S Next™

**Stemgent brings you the newest proven reagents and tools from the best and brightest stem cell scientists and laboratories.**

The Stemgent Scientific Advisory Board

**Jeffrey M. Karp, Ph.D.**  
 Biodegradable, biocompatible engineered materials and polymeric delivery systems  
*Instructor in Medicine, Harvard-MIT Division of Health Sciences and Technology, Brigham and Women's Hospital*

### Science

#### Noggin enhances dopamine neuron production from human e...

September 9, 2008

Noggin promotes dopamine neuron differentiation and survival from human and mouse embryonic stem cells.

[More](#)

#### A Drug-Inducible System for Direct Reprogramming of Hum...

September 11, 2008

New System will facilitate the characterization of the reprogramming process and provides a unique platform for genetic ...

[More](#)

### What's Next

#### What's next in stem cell science?

New drugs that could prevent metastasis... Transdermal patches for internal organs... RNAi therapeutics... Members of our Scientific Advisory Board describe whats coming next in stem cell science - in fascinating videos you can **watch online or download for your iPod®**.

### Collaborators

#### Invite your collaborators.

Your Collaborator Network makes it easy for you and scientists you have invited to securely share information about what reagents and tools have been working best. To invite collaborators, simply enter their email addresses here.
